

Sapphire Portable CCTV

The best on-the-go Low Vision reading magnifier: Macular degeneration, glaucoma, cataract, and other causes of vision loss no longer will prevent you from reading small print on menus, maps, receipts, pill bottles, and other items.

With the battery-operated SAPPHIRE handheld magnifier, you can magnify reading and detailed illustrations from 3.4 to 16 times on a bright, high-contrast display screen while at the store, on trips near and far, and at home as you move from room to room.

Sapphire is a superior independent living aid to a clumsy magnifying glass. A sliding magnification bar makes it easy to adjust and readjust the magnification to the level you need in any situation. Easily go from reading the larger type on a contract or bill to the fine print - and back again. There's no frustrating distortion and readjusting when you move the sapphire like there is with a magnifying glass.

Easily change the colour of type and background until you can see type better. Change to white type on a black background, yellow type on a blue background, full colour - or any of 23 type and background colour combinations. The seven-inch LCD screen reduces glare from lamps and direct sunlight, making the sapphire a valuable reading aid.

- Connects to a TV set
- Battery: Internal, rechargeable batteries. Battery life: 4 hours.
- Built-in handwriting stand
- Special bottle viewing mode
- Easy to read flat materials
- Magnifies three-dimensional objects
- 7" WideScreen display
