

SenseView Light Pocket CCTV

For those that want the smallest screen that is still useful: The SenseView Light hand-held Pocket CCTV is the answer.

The small screen size is compensated by the contrast and brightness of the new technology AMOLED WideScreen.

The SenseView Light is easy to use for those who are unfamiliar with technology products. Just turn it on with one button, place it over an object and the magnified image appears in the display window.

The semi-distance viewing function allows an overview and zooming in by moving the SenseView Light closer to the text. If more magnification is needed, there is additional digital magnification available at the push of a button.

The new technology AMOLED screen has a wide viewing angle, making it easier to read.

If you want to read any texts on high or low shelves in the supermarket, you can take a snapshot of it and read it off the screen while holding it at a comfortable height.

It is possible to read with the screen in a comfortable reading angle, by placing it flat on the text or by simply holding it in your hand. The built-in rechargeable battery allows a generous 3.5 hours of continuous use.

Specifications

- Full colour, high contrast black & white and high contrast white & black reading modes
- 3.4 inch internal widescreen.
- Magnification: 1.5 – 10.5 x
- freeze frame (snapshot mode)
- Brightness control
