

Student Addition

More and more people with low vision are on the move and want or need to take their computers and magnification with them. The MagniLink Student Addition is a portable CCTV with a combined reading and distance camera.

Ready, set, go. The Student Addition camera arm is sturdy, but weighs only 900 grams. The base weighs 700 grams and multiple bases can be used. Both base and camera arm are easily transported with the included carrying case. The unit is mounted in a couple of seconds and the connection to a computer is easily done through a single USB port. The Student Addition is powered from the computer and no external power supply is necessary. The camera picture is presented in a Windows application where size and position of the window can be adjusted for different split screen modes.

Compatibility

Student Addition is compatible with both 32 and 64 bit versions of Windows XP SP2, Vista and Windows 7, and Apple.

Comes with a free version of iMax software so it's MAC compatible!

Easy to use

All functions are handled directly from the computer keyboard. It is also possible to connect the Student Addition to a PC-monitor or TV set. It is very easy to change between the reading and distance modes by tilting the camera head.
